

Hydrodemolition Blast Water Treatment

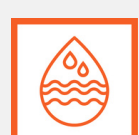

Siltbuster Ltd are the market leaders in providing rapidly deployable environmental protection using the UK's largest fleet of portable, modular treatment solutions.

After consultation with the industry, the HD unit was designed specifically to treat hydrodemolition blast water and will treat the water from a single or multiple hand lances. For larger flows our PMPU20 is the industry go-to option, or a bespoke system can be built to suit your site from our extensive range of equipment.

- Fully automated pH correction
- CO₂ offers lowest cost option for pH correction
- Gas cylinders are safe and easy to handle on site
- Removable bag captures rapidly settling solids
- Optional polymer dosing enhances solids settlement
